```

Conseils pour Godot

1. Structure de scène :

- Créez un nœud `DialogueManager` pour gérer le flux narratif
- Utilisez des `CanvasLayer` pour les calques (base, message0, message1)
- Un nœud `AnimationPlayer` pour les transitions (fadeInLeft, crossfade, etc.)

2. Gestion des assets :

- Organisez les dossiers : `Backgrounds/` , `CG/` , `SoundEffects/`
- Préchargez les ressources dans un `ResourceLoader`

3. Système de dialogue :

```
# Exemple de structure de données  
var script_sequence = [ { "type": "bgm", "file": "res://Music/AIKATYPE_
```

• Transitions :

- Utilisez `Tween` pour les animations simples :

gdscript

```
1. func fade_in(node, duration): var tween = create_tween() tween.tween.
```

2. Gestion audio :

- Créez un `AudioManager` avec des bus dédiés (BGM, SFX)
- Implémentez le fondu avec `tween_property` sur `volume_db`
